

Download Horses Breeding Health Disorders And Effects On Performance And Behavior

The aim of this review is to provide practical outcomes on how to manage equine transport stress. Many horses travel frequently during their life, and transportation is one of the major causes of injuries, health disorders, and economic loss for horse breeding and the wider equine industry. Horse breeding is reproduction in horses, and particularly the human-directed process of selective breeding of animals, particularly purebred horses of a given breed. The horse (*Equus ferus caballus*) is one of two extant subspecies of *Equus ferus*. It is an odd-toed ungulate mammal belonging to the taxonomic family Equidae. Aggression is a common problem in horses and includes chasing, neck wrestling, kicks and bites, and other threats. Signs of aggression include ears flattened backward, retracted lips, rapid tail movements, snaking, pawing, head bowing, fecal pile display, snoring, squealing, levade (rearing with deeply flexed hindquarters), and threats to kick., Horses Breeding Health Disorders And Effects On Performance And Behavior.
