Linear programming (LP, also called linear optimization) is a method to achieve the best outcome (such as maximum profit or lowest cost) in a mathematical model whose requirements are represented by linear relationships. In graph theory, the shortest path problem is the problem of finding a path between two vertices (or nodes) in a graph such that the sum of the weights of its constituent edges is minimized. SIAM Presents ... Features Lectures from our Archives Since 2008 SIAM has been capturing many Invited Lectures, Prize Lectures, and selected Minisymposia from our conference. This site is intended as a resource for university students in the mathematical sciences. Books are recommended on the basis of readability and other pedagogical value. Topics range from number theory to relativity to how to study calculus., Linear Networks And Systems Algorithms.
