This work presents four methods based on phase-space tomography for the characterization of the spatial structure of optical beams – the results of my PhD thesis. Each technique is optimal forThis thesis focuses on the fundamental problem of characterising partially coherent beams. The book describes several non-interferometric methods based on phase-space tomography for recovering the spatial coherence information of optical beams.In the context of optical beams, partially coherentThis thesis focuses on the fundamental problem of characterising partially coherent beams.
